AI Engineer | Generative AI, RAG & Evaluation Tooling

PROFESSIONAL SUMMARY

Independent AI developer building Python and JavaScript tools for generative media, retrieval-assisted writing, and model evaluation. Public projects include an image evaluation harness with automated tests, MCP servers for visual review and screen capture, and an OpenAI file-search script engine. Oracle Cloud certified, with published creative work that provides practical use cases for generation and quality review.

TECHNICAL SKILLS

Development: Python, JavaScript/Node.js, REST APIs, JSON, Git, Claude Code, command-line tools

AI integration: Anthropic SDK, OpenAI Responses API, Google GenAI SDK, Replicate, ElevenLabs, MCP/FastMCP, Ollama

Evaluation & reliability: LLM-as-judge workflows, JSON schemas, reference-based image review, error handling, retry logic, unittest, GitHub Actions

Retrieval & media: OpenAI vector stores/file search, Supabase/Postgres, ChromaDB, FFmpeg, Pillow; Remotion, Blender and Roblox workflows

SELECTED ENGINEERING PROJECTS

GENERATIVE AI EVALUATION HARNESS | Python, Anthropic, Ollama

github.com/wonderstone843/genai-eval-harness

- Built separate image graders for character identity, anatomy, prompt adherence, and text; aggregate structured verdicts into JSON pass/fail manifests with critical-issue overrides.
- Implemented batch evaluation, prompt-cache warm-up, token-usage reporting, and failure handling for unreadable images, API errors, malformed verdicts, and truncated responses.
- Added a paired groundedness experiment comparing local-model answers with and without supplied reference context; exclude incomplete pairs and report answers containing no factual claims.
- Maintain 41 automated tests using stubbed model responses and GitHub Actions checks on Python 3.10 and 3.13. Human-label validation of judge accuracy remains planned.

VISION QA MCP SERVER | Python, FastMCP, Claude Vision

github.com/wonderstone843/vision-qa-mcp

- Expose image review as an MCP tool accepting reference images, character rules, style notes, and scene types; return structured scores, issues, recommendations, and a regeneration flag.
- Apply a configurable pass threshold and critical-issue checks; return explicit failure results when an image is missing or the model cannot provide a verdict.

SELECTED ENGINEERING PROJECTS - CONTINUED

RAG POV SCRIPT ENGINE | JavaScript, OpenAI Responses API

github.com/wonderstone843/rag-pov-script-engine

- Create an OpenAI vector store, upload and index a local knowledge corpus, and persist its identifier for subsequent retrieval-assisted writing.
- Generate first-person scripts through the Responses API with file_search, configurable duration and voice, and instructions to cite source filenames and acknowledge missing information.

CLAUDE VISION MCP SERVER | Python, FastMCP, Screen Capture

github.com/wonderstone843/claude-vision-mcp

- Provide tools for full-screen, window, region, and browser-page capture, window listing, and pixel-based screenshot comparison for Claude Code workflows.
- Implement image resizing, capture-error reporting, and browser lifecycle cleanup; document macOS screen-recording permission requirements.

GENERATIVE VIDEO PIPELINE | Python, AI APIs, FFmpeg

github.com/wonderstone843/genai-video-pipeline

- Developed modular orchestration code for script generation, reference-guided images, ElevenLabs narration, and FFmpeg assembly, with separate image-only and voice-only entry points.
- Implemented image batch controls, exponential-backoff retries, a Gemini-to-Replicate fallback path, and estimated cost tracking for script, image, and voice generation.

INDEPENDENT AI & CREATIVE WORK

GALAXYBREYNE | Independent | Remote | 2024 - Present

- Built and used AI production workflows integrating tools such as OpenAI, Google GenAI, ElevenLabs, Claude, and Replicate to create 44 published video projects, growing an audience to 9.4K subscribers.
- Maintain character references and visual bibles; review likeness, clothing, scale, continuity, and prompt adherence. Document errors, fixes, and workflow decisions in collaboration logs.
- Additional work: Owl Noches, an in-progress Roblox world developed with AI-assisted building and iterative scene review.

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

PROFESSIONAL BACKGROUND

COMMERCIAL TRUCK DRIVER | 2016 - Present

US Xpress Enterprises | 2018 - 2024
Arctic Express | 2026 - Present

Managed freight delivery, route planning, scheduling, and time-sensitive decisions across over-the-road and regional assignments, with responsibility for safety and independent operations.
